

Fabric Cleaner & Protectant Tutorial

Cleans, Protects & Deodorizes in One Easy Step

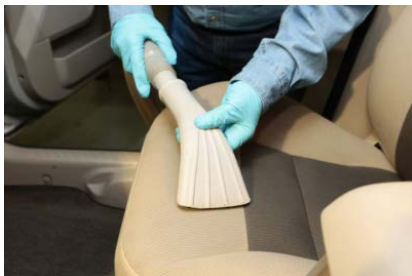

ABPCO Fabric Cleaner & Protectant is a revolutionary new product formulated to clean, protect and deodorize today's economical automotive fabrics in one quick step. It quickly removes a wide variety of contaminants from upholstery, while leaving a protective barrier that prevents staining and re-soiling.

Fabric Cleaner & Protectant also contains a powerful malodor counteractant, that neutralizes odors while leaving a pleasant neutral odor.

Cleaning Procedure:

The key is to clean the entire seat panel, and to avoid saturation. Our recommended seat cleaning process is as follows:

STEP 1
Remove all debris from seats by hand. Thoroughly vacuum all seat fabrics.

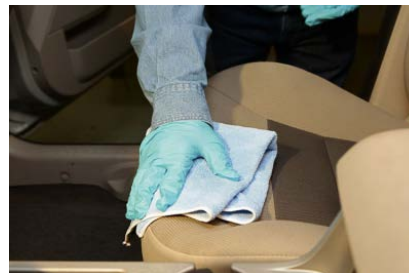

STEP 2
Dry brush the entire seat panel in one direction (not in circles) with a soft bristled upholstery brush.

STEP 3
Lightly mist Fabric Cleaner & Protectant on the entire seat panel (not just the soiled section of the seat), and allow to dwell 3 – 5 minutes. Do not over-saturate the fabric

STEP 4
Agitate the product directionally (not in circles) over the entire seat panel with a soft-bristled upholstery brush. This ensures that the "lay" of the fabric's nap is uniform.

STEP 5
Wipe the fabric dry directionally (not in circles) with a clean microfiber towel.

Comments:

- For heavy stains, repeat steps
- Be sure to clean both the seats and seat backs
- Do not use this product on leather or interior plastics
